

Dear Sir,

Greetings from Robomatic Precon Pvt. Ltd.

Your continuous patronage has inspired us to launch yet another new product line – **Robomatic Precast Hollowcore** Wall Panels using Elematic Acotec-line with Extruder Technology. The construction process is **7x times** faster and that much easier with our precast ready made wall panels that are strong, durable and cost efficient.

Robomatic Precon is promoted by Founder and Managing Director of Robo Silicon Pvt. Ltd. popularly known as **Robosand** (right substitute for river sand) across India.

Through the years, Robo Silicon and Robotek have successfully brought forth green construction material that is good substitute to the precious and fast depleting natural resources. Many of your tall projects bear proud testimony to our products. RoboSand, Rotek Plaster Sand and Robotek AAC Blocks have enjoyed your constant patronage and partnership.

Our new product line – Robomatic Precast Hollowcore Wall Panels are most suitable for partition walls. They are non-load bearing, durable, and highly superior to the alternatives of brick walls or AAC walls. The construction time is **7x times** faster and cost efficient. This Fast Forward wall technology is most suitable for construction of Residential, Industrial, Commercial or Institutional projects.

Through successive years, due to our preferred product quality and customized service standards, we have enjoyed your exclusive patronage in the industry. We intend to out-beat our own standards of quality and product exclusivity to suit your requirements and standards.

We solicit the same patronage from you for our new endeavor - Precast Hollowcore Concrete Panels as you have extended in the past.

Yours Faithfully
For Robomatic Precon Pvt. Ltd.

Vijay K Kosaraju
